

SYNTHETIC TURF
Sports Systems

Play More.

PROVEN QUALITY. SUPERIOR SAFETY.

BE MORE

Act Global's technical and social culture is dedicated to serving the safety and performance needs of players. With a foundation of innovation, integrity, and quality, we strive to positively impact the lives of athletes and their communities by manufacturing the highest quality synthetic turf surfaces.

USA MANUFACTURING

Act Global is proud of our 210,000 sqft research and manufacturing facility located in Calhoun, GA. We are ISO 9001 certified which proves our ability to consistently provide products that meet customer and regulatory requirements. Our own yarn extrusion line gives us full control to produce the highest quality fibers in the industry.

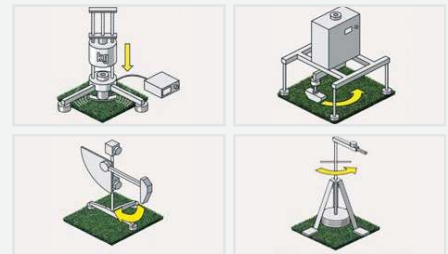

DURABILITY & UV TESTING

Our systems are required to pass over 60 R&D protocols. This includes Lisport durability, UV stability, tensile strength, and tuft bind tests. The results prove our systems perform better and last longer. This gives our customers 60+ playing hours a week with no need for a break.

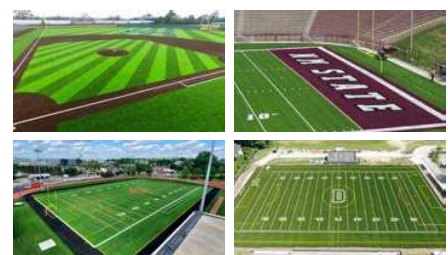

SAFETY & PERFORMANCE TESTING

Act Global uses natural grass benchmarks set by FIFA and the Synthetic Turf Council when engineering our systems. We rigorously test our products and installations according to FIFA and ASTM standards to pass important safety and performance criteria including shock absorption, skin abrasion, traction, rotational resistance, and vertical deformation.

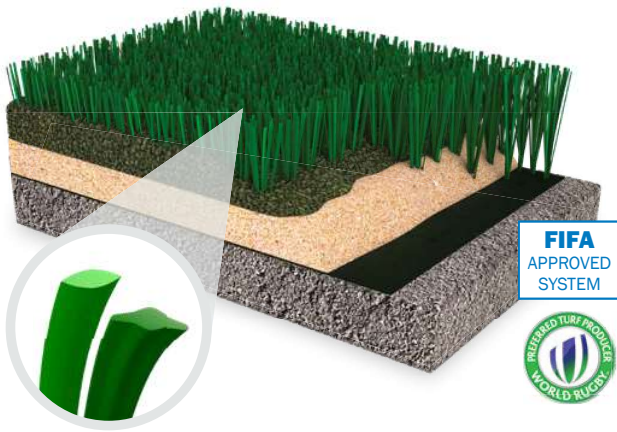

ANY CLIMATE, ALL WEATHER SOLUTION

Our systems can withstand and perform in hot or cold climates. The UV stabilizers in our yarns prevent degradation and color fading. Perforated backings allow for fast drainage to prevent flooding so our customers will never have to deal with rain outs.

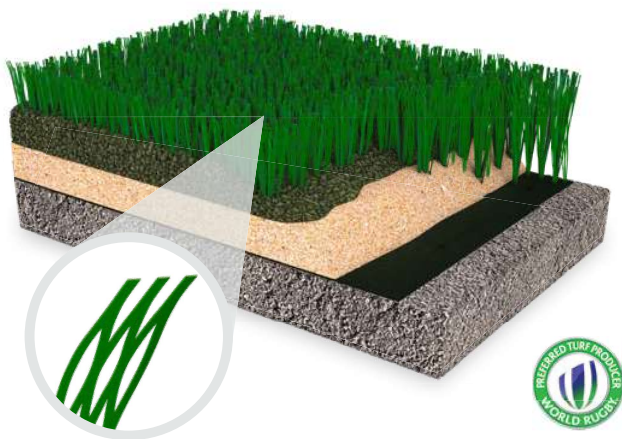

XtremeTurf™ DX

Yarn	Monofilament Blend (Diamond/Wing Diamond)
Description	Monofilament diamond blades are thick, stand up straight, and resist breaking. Beautiful, natural grass appearance.
Player Benefits	Superior ball roll, Stands up straight with 'bounce back' characteristics.
Recommended Applications	Soccer, Lacrosse

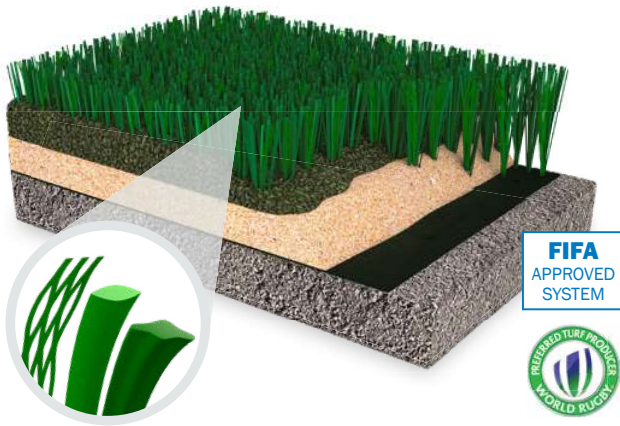

XtremeTurf™ F

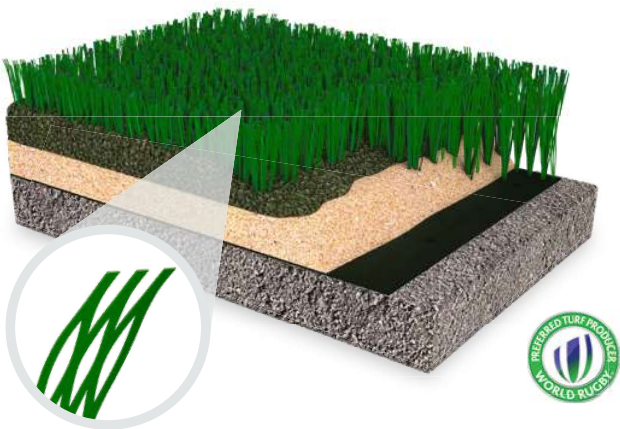

Yarn	Fibrillated (also known as Slit Film)
Description	Fibrillated fibers have small slits that give it a honey-comb shape. As the system matures, fibers "blossom" and become smaller individual fibers for plush appearance.
Player Benefits	High durability, lower infill splash
Recommended Applications	Football, Rugby

XtremeTurf™ DXF

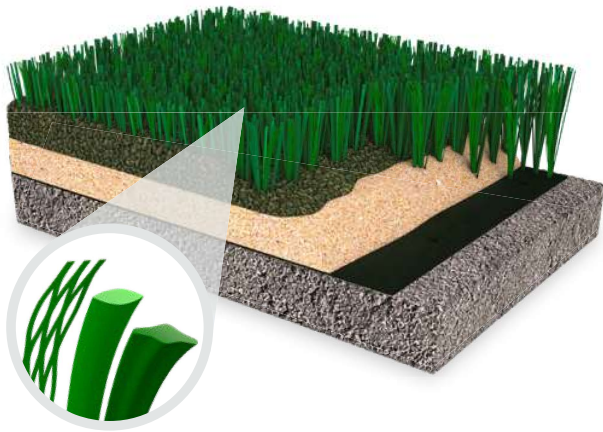

Yarn	Dual diamond monofilament and fibrillated blend
Description	Combines the best of both monofilament and fibrillated systems offering tremendous durability with a beautiful, natural look.
Player Benefits	Balanced durability and ball interaction
Recommended Applications	Football, Soccer, High traffic Multi-sport fields

XtremeTurf™ S5

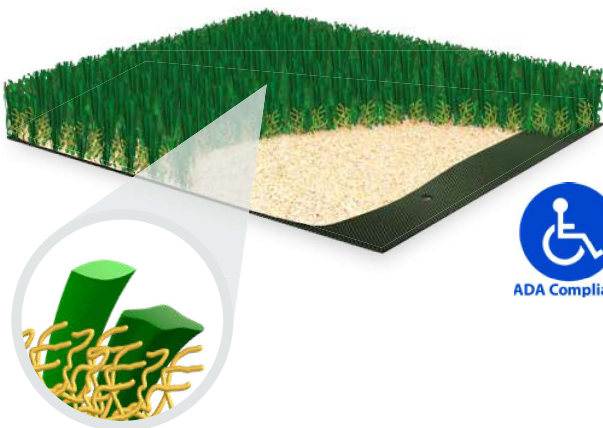

Yarn	Fibrillated (Slit film)
Description	Our premium fibrillated system designed with a high face weight and triple layer backing. Used throughout the NFL and NCAA.
Player Benefits	Ideal for high-intensity use, lower infill splash, skin friendly, Ideal traction and foot stability
Recommended Applications	Professional & Collegiate Football, Heavy traffic stadiums

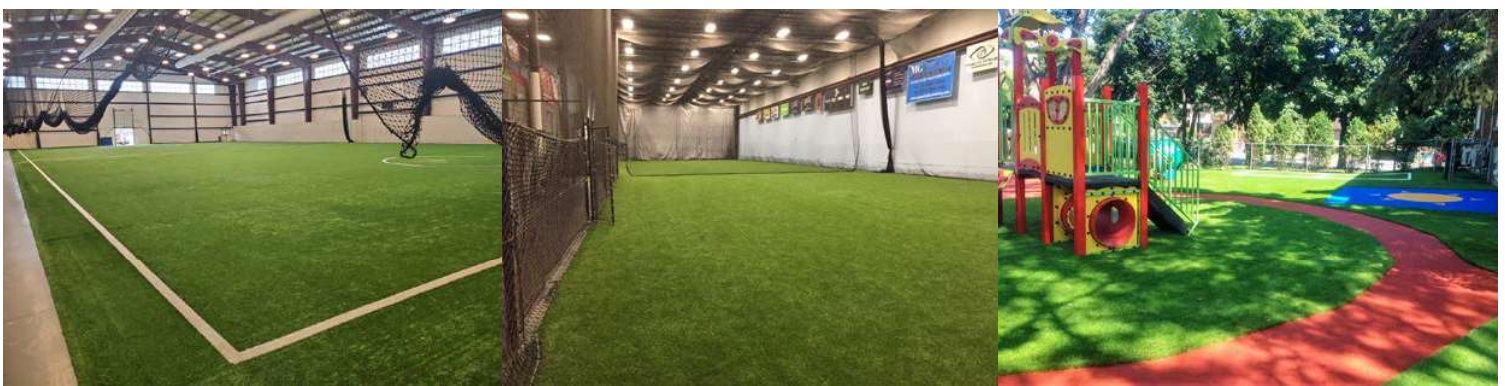

NR34

Yarn	Dual diamond monofilament and fibrillated blend
Description	Engineered in partnership with Nolan Ryan and his RS3 group, NR34 is our premier system specifically designed for the game of baseball.
Player Benefits	Natural ball bounce, truer ball pace, reduced infill splash, exceptional durability
Recommended Applications	Baseball, Softball

XtremeTurf™ **MULTIPLAY** & **MULTIPLAY PRO**

Yarn	Monofilament with Thatch
Description	A durable, low-cut system engineered for recreational and sports applications. Can be sand dressed or non-infilled. - The Multiplay-Pro has a 3mm foam pad
Player Benefits	Extremely durable and versatile. Sports system technology combined with natural grass look.
Recommended Applications	Batting cages, Tennis courts, Playgrounds, Indoor athletics, Weight rooms
